## Upgrading Your System with a Patch

### To upgrade using a patch:

1. Download the patch file to your PC.
2. Create a backup of your current system.
  - a. On the VoiceDirector Administrator interface, click the **Settings** icon in the main menu bar, and then click the **Backups** link.
  - b. Click the **Backup Now** button.  
*A backup file will be generated and stored on the VoiceDirector server. The backup file displays in the Manual Backups Online table. The File Name indicates the date and time of the backup.*
  - c. Click the **Download Backup** button.
  - d. Optional: Verify the backup using MD5.
3. Install the patch on your system.
  - a. On the VoiceDirector Administrator interface, click the **Settings** icon in the main menu bar, and then click the **Upgrades** link.
  - b. Click the **Browse** button to locate the file on you PC, and then click the **Upload** button.  
*The Upgrade file will be uploaded to the VoiceDirector server. The upgrade file displays in the Upgrades Online table.*
  - c. Click the **Install** button in the **Options** area.  
*Your system should now be upgraded.*
